Version: 1.1

Intended audience: company managers who operate a WaveSparks Community organization through the Admin interface.

This is a product operations guide. It explains routine setup, member administration, Event operations, moderation, and reporting in plain language. Technical deployment, identity, database, email, recovery, and service maintenance belong in the project `README.md` and should be handled by the designated technical owner.

1. Your role at a glance

As an Admin, you are responsible for a healthy member experience from invitation through ongoing participation. Your main jobs are to:

- keep organization details and invitation guidance current;
- invite the right people and give them the right Space access;
- create, launch, monitor, and close Events;
- approve or remove Mentor designation when your organization has verified it;
- moderate Profiles and community content;
- oversee Introduction requests and Matching quality;
- review activity trends and follow up on operational issues.

You do not need to maintain hosting, sign-in infrastructure, the database, or email-delivery services. When a problem cannot be solved in the Admin interface, collect the affected person's email, Space, time, and a screenshot, then contact the technical owner.

The four controls to check separately

A person's access is controlled by four separate choices:

Control	Typical values	What it decides
Account permission	Member or Administrator	Whether the person can open the Admin interface
Mentor designation	Not a mentor, Needs review, or Approved	Whether the person can be discovered and matched as a Mentor
Account state	Invited, Connected, Suspended, or Deprovisioned	Whether the account can use the organization at all
Space access	Active, Waitlist, Rejected, Suspended, or Removed	Whether the person can enter one specific Community or Event

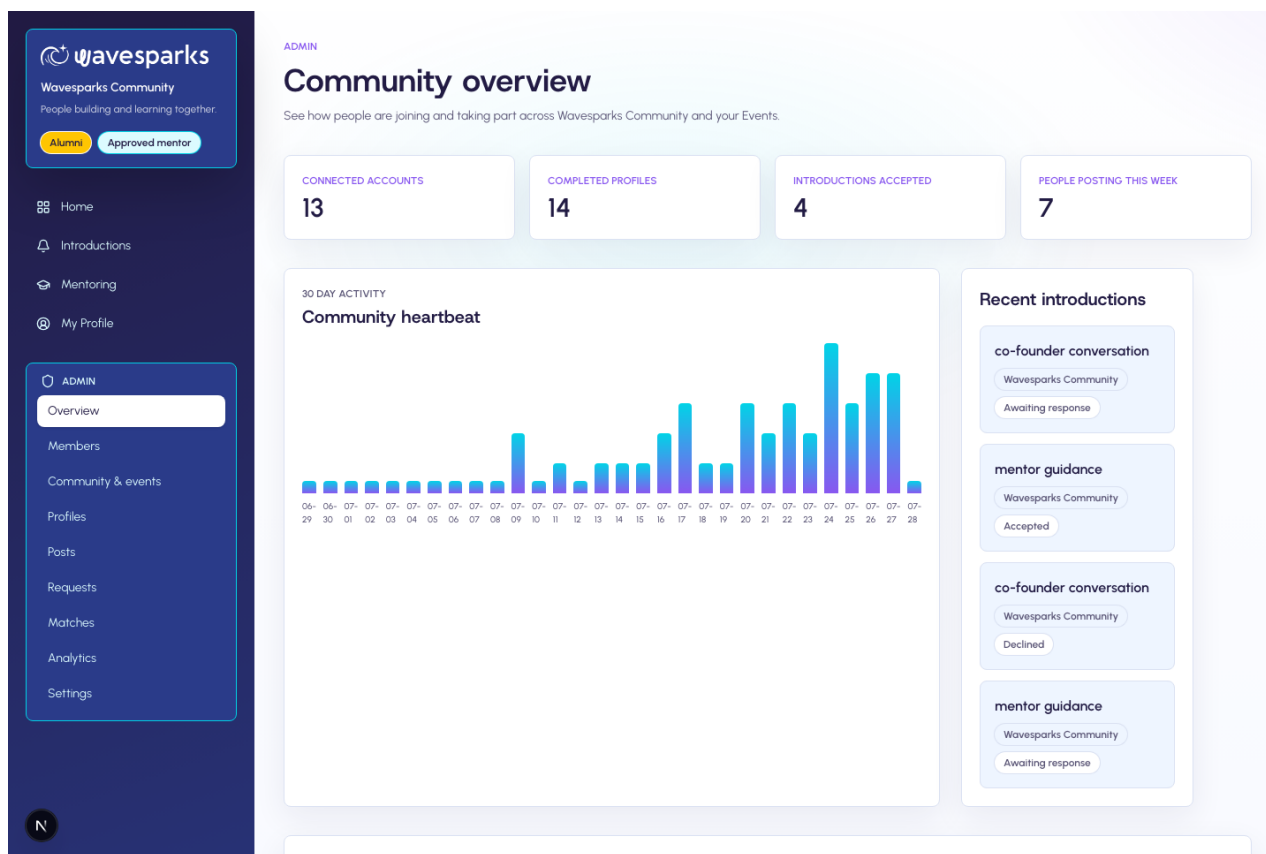

Changing one control does not automatically change the others. For example, approving a Mentor does not make that person an Admin, and adding someone to an Event does not add them to the Main Community.

2. Your first 30 minutes

Before inviting a full cohort, complete this short setup:

1. Open the invitation email and sign in with the exact email address that was invited.
2. Confirm that Admin appears in the main navigation.
3. Open Admin -> Overview and note the current account, Profile, Introduction, and activity totals.

4. Open Admin -> Settings and confirm the organization name, logo, tagline, description, and invitation guidance.
5. Open Admin -> Community & events and review the Main Community and any existing Events.
6. Invite one test Member, add that person to a test or draft Event, and confirm that the intended access works.
7. Save the name and contact method of the technical owner who supports this project.

Admin Overview

Know the Admin navigation

Page	Use it for
Overview	A quick operating snapshot and recent activity
Members	Invitations, imports, permissions, Mentor designation, account state, and Space access
Community & events	Main Community and Event setup, Participants, Content, and Matching
Profiles	Profile review, Featured or Needs review controls, and CSV export
Posts	Content moderation and featured content
Requests	Introduction oversight and manual Introductions
Matches	Match review, feedback, configuration, and refreshes
Analytics	High-level member and engagement trends
Settings	Organization identity and invitation guidance

3. Complete the organization setup

Open Admin -> Settings and review each field as a Member would see it.

Name and tagline

Use the official organization or program name. Keep the tagline short enough to explain the community's purpose at a glance.

Logo

Upload a current, approved logo. After saving, open a member-facing page and confirm that it is readable on both light and dark areas of the interface.

About or community description

Explain:

- who the community is for;
- what Members can do here;
- what behavior is expected;
- where to ask for help.

Invitation guidance

Write a short note that prepares recipients for the first login. Tell them to use the exact invited email address, accept the invitation within seven days, and complete their Profile before trying to interact.

After any change, save it and check the result from a member-facing page. If the setting saves but does not appear, record what you changed and contact the technical owner.

4. Invite and onboard Members

Invite one person

1. Open Admin -> Members -> Invite people -> One person.
2. Enter the person's exact email address and, if available, their name.
3. Choose Member or Administrator.
4. Choose Not a mentor or Approved mentor independently.
5. For a Member, select the Main Community or Event and the initial Space access state.
6. Review the choices, then send the invitation.
7. Confirm the row-level invitation status in Members.

The recipient must accept within seven days and use the exact invited, verified email address. If the invitation expires, send a new one. Resending creates a new valid invitation; revoking makes the old link unusable.

Invite Administrators individually. An Administrator can exist without Space access, but they must be explicitly added to a Space if they need to appear in People, post, participate in Matching, or create a manual Introduction there.

Import a cohort

Use bulk import for a list of Members who should receive the same initial Space access.

1. Open Admin -> Members -> Invite people -> Import.

2. Upload a CSV or XLSX file, or paste CSV data.
3. Map the required Email field and the optional Name field.
4. Select one target Space and one initial access state.
5. Review the preview and correct or remove invalid rows.
6. Confirm Invite N people.
7. Review each result and retry only failed rows.

Import limits:

- maximum file size: 2 MB;
- first worksheet only for XLSX;
- maximum 20 columns;
- maximum 100 non-empty data rows;
- the first occurrence of a duplicate email wins.

Selecting a file does not send invitations; nothing is sent until confirmation. Bulk import always creates Member + Not a mentor. It cannot grant Admin permission or Mentor approval in bulk. Existing Profiles and global permissions are not overwritten.

The screenshot displays the 'Members' management page in the WaveSparks Community Admin Manager. The sidebar on the left contains navigation links: Home, Introductions, Mentoring, My Profile, and an ADMIN section with sub-links for Overview, Members (selected), Community & events, Profiles, Posts, Requests, Matches, Analytics, and Settings. The main content area is titled 'Members' and includes a sub-header 'ADMIN - MEMBER MANAGEMENT'. A search bar and filter buttons are at the top right. Below the filters, a table lists 14 members. Two members are visible: Priya (Mentor review) and Tom (Approved mentor). Each member entry shows their email, account status (Active), invitation status (Connected), and community/event access (None for Priya, Active for Tom). A 'Manage member' button is present for each entry.

Members management

Follow onboarding progress

Use the Members list to distinguish:

- Invited: invitation sent, but account connection is not complete;

- Connected: the person signed in and connected successfully;
- Suspended: a reversible organization-wide block;
- Deprovisioned: the organization no longer provides access.

If a connected Member can open the organization but not a specific Space, check that Space's access separately. If the Member can read but cannot post, comment, follow, save, browse People, use Matches, or manage requests, ask them to complete all seven required Profile items.

5. Manage roles, Mentors, and access safely

Account permission

Grant Administrator permission only to people who need the full Admin interface. There are no limited Admin roles such as invitation-only or moderation-only. An Admin cannot remove their own effective Admin permission.

Before changing another Admin:

1. confirm the person's identity;
2. confirm the requested permission with an authorized manager;
3. make sure at least one other active Admin will remain;
4. record the reason in your organization's change log.

Mentor designation

Mentor designation is a service qualification, not an administrative role.

- Not a mentor: not offered as a Mentor.
- Needs review: requires an organization decision.
- Approved: eligible for Mentor discovery and matching when the person's Mentor settings and Space access are also ready.

Removing approval stops new Mentor discovery and matching and expires pending Mentoring requests. It does not erase accepted or declined history.

Account state versus Space access

Use an account-wide state when the decision applies everywhere:

- Suspended for a reversible organization-wide block;
- Deprovisioned when the organization no longer provides the account.

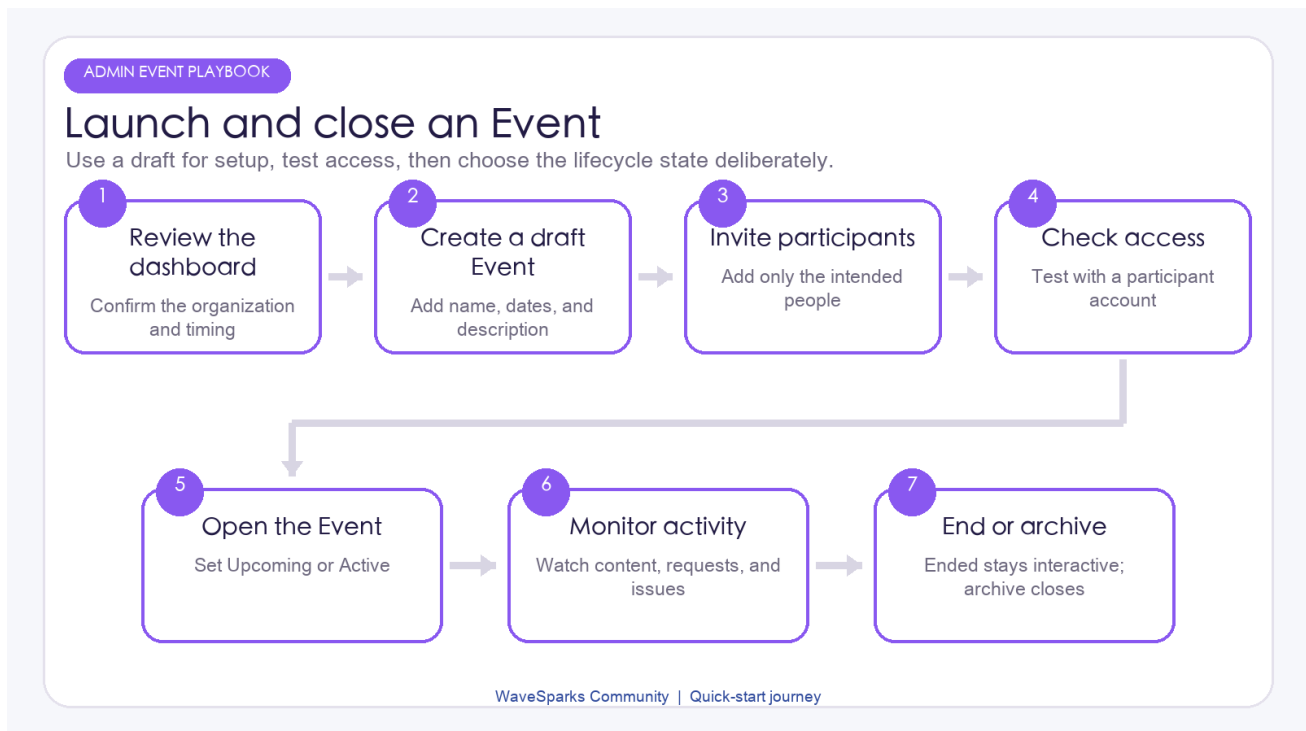

Use Space access when the decision applies to only one Community or Event:

- Active allows participation while the Space lifecycle also permits it;
- Waitlist and Rejected do not grant access;
- Suspended temporarily blocks that Space;
- Removed ends that Space entitlement.

For a suspected account-security issue, suspend the account in WaveSparks immediately, then contact the technical owner so sign-in sessions can also be handled.

6. Create and run an Event

Each organization has one permanent Main Community and can have multiple Events. Event access is invitation-only and independent from Main Community access.

Admin Event launch flow

Event lifecycle

State	Member experience	Manager use
Draft	Participants cannot enter	Build and review privately
Upcoming	Active participants can enter	Open before the scheduled start
Active	Normal participation	Run the live program
Ended	Still readable, writable, and matchable	Keep post-event interaction open
Archived	Hidden and inaccessible to participants	Close access while retaining data

Important: Ended does not close interaction. Use Archived when access and Matching must stop.

Create and launch

1. Open Admin -> Community & events and create an Event.
2. Enter the name, slug, description, tags, and schedule.
3. Keep the Event in Draft while preparing it.
4. Decide whether Matching will be available and review its settings.
5. Add participants through individual invitations, bulk import, or the Event's Participants area.
6. Add an Admin as a participant if that Admin needs to participate socially or create manual Introductions in the Event.

7. Review content, participant access, dates, and invitation guidance.
8. Change the Event to Upcoming or Active.
9. Test with a real Member account before announcing the launch.

The screenshot displays the WaveSparks Community Admin Manager interface. On the left is a dark blue sidebar with the WaveSparks logo and navigation links: Home, Introductions, Mentoring, My Profile, ADMIN, Overview, Members, Community & events (highlighted), Profiles, Posts, Requests, Matches, Analytics, and Settings. At the bottom of the sidebar is a user profile for 'Avery' (Active) with a 'Sign out' button. The main content area has a light blue header with 'Members' and 'Community & Events' tabs. Below the header, the 'Community & Events' section is titled 'ADMIN - COMMUNITY ACCESS' and includes a 'New Event' button. A purple box states 'Access is managed separately' with a note that joining an event does not grant access to the community. Below this, the 'Wavesparks Community' section shows '12 active members' and a 'Manage community' button. The 'Events' section notes 'No current Events yet' and provides instructions on creating or reviewing events.

Community and Events

Monitor the live Event

During the Event:

- check participant access and invitation failures;
- review Profile completion and help Members who cannot interact;
- review Posts and moderation needs;
- watch pending Introduction requests;
- sample Matches and anonymous Helpful or Not relevant feedback;
- use Analytics as a directional snapshot, not as a complete reporting system.

Close or continue

Choose Ended when the formal program has finished but you want Members to continue reading, posting, and matching. Choose Archived when participant access must stop.

To move selected Event participants into the ongoing Main Community, use Add N to Main Community. This creates active Main access and preserves Event access. It does not copy Posts, follows, Matches, feedback, or Introductions.

Adding someone to an Event never grants Main access automatically.

7. Review Profiles and protect personal information

Use Admin -> Profiles to review complete Profiles, contact details, Featured items, and Profiles that need attention.

Good manager practice:

1. open a Profile only for a clear operational purpose;
2. correct designation or review status through the available controls;
3. feature Profiles using a consistent, documented rule;
4. avoid copying contact details into informal messages;
5. export CSV data only when necessary and store it in an approved location;
6. delete working copies according to company retention policy.

Admins can see sensitive Profile and contact information. This permission is for community operations, not for sharing details without the person's consent.

8. Moderate community content

Open Admin -> Posts to:

- hide or unhide a Post;
- feature or unfeature it;
- lock or unlock comments;
- archive or reopen it;
- remove or restore an image, link preview, or comment.

Before a material moderation action, record the Post or Comment ID, Space, reason, and decision maker in your normal company ticket or case log. The current product does not provide a member report queue or a complete central Admin audit log.

Suggested response order:

1. preserve enough evidence to review the situation;
2. hide or lock the content if immediate harm may continue;
3. confirm the applicable community rule;
4. decide whether to restore, archive, or keep it hidden;
5. communicate the outcome through your organization's approved channel;
6. suspend the account only when the issue applies across the organization.

9. Oversee Introduction requests

Use Admin -> Requests to filter Introductions by status, source, and Space.

For a manual Introduction:

1. make sure you personally have access to the source Space;

2. confirm that both people are current participants with complete Profiles;
3. choose who is asking and who they should meet;
4. enter the purpose, a clear note, and a suggested first message;
5. review the request before sending.

An Introduction does not grant access to another Space. Contact details are revealed only to the two participants after acceptance. Do not disclose either person's contact details to someone else or bypass their consent.

Pending requests can become accepted, declined, or expired. WaveSparks does not provide in-product chat, calendar booking, or meeting management after acceptance.

10. Oversee Matching without over-tuning it

ADMIN - MATCHES

Review match suggestions

See the suggestions people receive in Wavesparks Community and each Event.

Refresh matches

All Strong matches Good matches Co-founder Collaborator Mentor

MENTOR

Wavesparks Community

Kai and Marcus

Marcus's experience may fit what you are looking for: their capabilities complement the needs you shared; you are working in relevant problem areas. Marcus offers GTM, matching your need for GTM. Relevant signals include fintech, B2B SaaS, sales.

MENTOR

Wavesparks Community

COLLABORATOR

Wavesparks Community

Kai and Tom

You and Tom may be able to help each other: your availability and commitment look compatible; the location or time-zone fit looks practical. Tom offers GTM, matching your need for GTM. you offer operations, matching your need for operations. Relevant signals include B2B SaaS, GTM, operations.

Matching management

Matching runs separately inside each Space. Eligible candidates need a connected account, active Space access, a complete Profile, a complete Space intent, and Matching opt-in.

In Admin -> Matches, you can:

- review Strong and Good matches by Match type;
- review anonymous Helpful or Not relevant feedback;
- review recent Matching runs;
- create or adjust Match types;
- change direction, minimum score, and weighting;
- start a full refresh.

Treat the fit index as a relevance signal, not a success probability, ranking of personal value, or reputation score.

Before changing settings:

1. write down the current configuration;
2. define the problem you are trying to solve;
3. change as little as possible;
4. run the refresh at a low-activity time;
5. sample results across different Member types and Spaces;

6. watch feedback before making another change.

No more than 12 Match types can be enabled. The six weights for a Match type must total 100. An Ended Event continues matching; an Archived Event does not.

11. Use Overview and Analytics for decisions

Overview provides a quick view of connected accounts, complete Profiles, accepted Introductions, weekly posters, and recent activity. Analytics provides basic account, Profile, Introduction, teams-formed, and engagement trends.

Use these pages to answer practical questions:

- Are invitees connecting successfully?
- Are Members completing Profiles?
- Are Introductions being accepted?
- Is activity concentrated in one Space?
- Did participation change after an Event or communication?

These numbers are operational snapshots. They are not a complete business-intelligence system and should not be used alone for performance evaluation.

12. A simple operating rhythm

Daily during an active Event

- Review new invitations and failed rows.
- Check access questions and Profile-completion blockers.
- Review urgent moderation needs.
- Check pending Introduction requests.
- Note any repeated issue that may require technical support.

Weekly

- Review Member, Mentor, and Admin permissions.
- Review Event participant lists and lifecycle states.
- Sample Posts, Matches, and feedback.
- Review Profiles needing attention.
- Check Overview and Analytics trends.
- Follow up on outstanding support cases.

Monthly

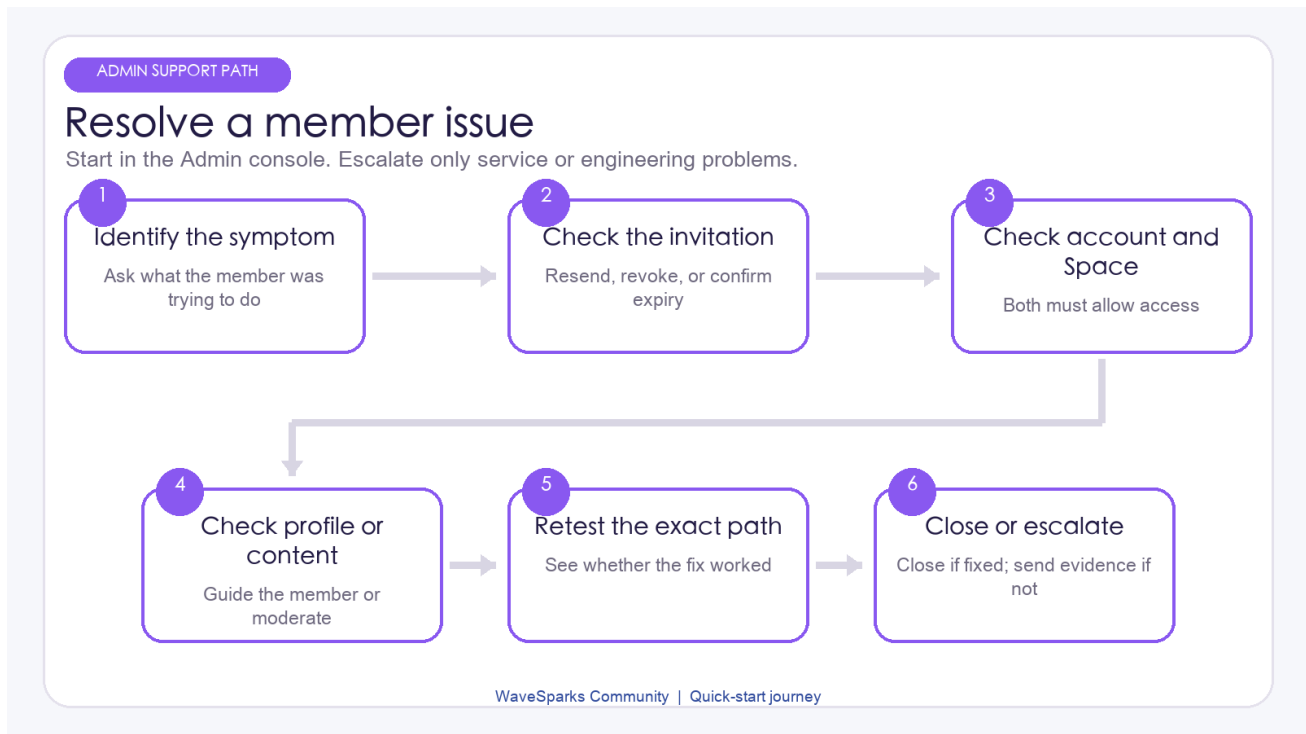

- Confirm organization details and invitation guidance are current.
- Review inactive or departed accounts and remove unnecessary access.
- Review who still needs Administrator permission.

- Review Featured Profiles and content.
- Delete unneeded local exports according to policy.
- Meet the technical owner to review recurring service issues.

Before and after every Event

Before launch, confirm content, participants, lifecycle, Matching, dates, and test access. After the Event, decide whether it should remain Ended or become Archived, then decide which participants should be added to Main.

13. Troubleshooting for managers

Admin support decision flow

Symptom	What you can check in the Admin interface
Invitation was not received	Confirm the email, check invitation status, then resend once; ask the recipient to check spam
Invitation expired	Send a new invitation; the old link cannot be reused
Connected person sees only My Spaces	Confirm Active access for the intended Space
Event participant cannot see Main	This is expected; explicitly use Add to Main Community
Person can read but cannot interact	Ask them to complete all seven required Profile items
Admin is absent from People or Matches	Add that Admin as a participant in the Space
Approved Mentor is not discoverable	Check account connection, Approved status, active Space access, Mentor opt-in, and the mentor_match offer
No Matches appear	Check Profile, Space intent, opt-in, candidate count, Match settings, and Event lifecycle
Members can still post in an Ended Event	This is expected; Archive the Event to stop access

Symptom	What you can check in the Admin interface
Content should stop receiving replies	Lock comments, hide it, or archive it as appropriate
A metric looks wrong	Confirm filters and timing; compare with the underlying Members, Requests, or Posts list

When to contact the technical owner

Situation	Information to provide
No one can sign in, or sign-in repeatedly fails	Affected emails, time, browser, screenshot, and whether all users are affected
Invitations repeatedly fail after a correct resend	Recipient email, invitation status, time, and screenshot
A saved setting or access change does not take effect	Admin action, person or Space, expected result, actual result, and time
Pages show errors, fail to load, or time out	Page address, action just performed, time, screenshot, and number of affected users
Product notifications repeatedly do not arrive	Recipient, notification type, Space, approximate time, and whether the in-app notification exists
Data appears missing, duplicated, or visible in the wrong Space	Exact record, affected users, Space, screenshot, and when it was first noticed
A security or privacy incident is suspected	Suspend access if safe, preserve evidence, record time and scope, and escalate immediately

Do not share passwords, invitation links, exports, or service credentials in a support message. Do not attempt command-line, database, deployment, or service-console changes unless the technical owner has explicitly assigned and trained you for that work.

14. Manager checklists

New Member

- Correct email and name entered.
- Correct Member or Administrator permission selected.
- Mentor designation reviewed independently.
- Correct initial Space and access state selected.
- Invitation status checked.
- Profile-completion guidance sent.

Event launch

- Event name, description, tags, and dates reviewed.
- Event remains Draft until setup is complete.
- Participant list and access reviewed.
- Admin participants added where needed.
- Matching choice and settings reviewed.

- Real Member access tested.
- Event changed to Upcoming or Active.
- Support contact communicated.

Event close

- Decision made between Ended and Archived.
- Members understand whether interaction remains available.
- Selected participants added to Main explicitly.
- Outstanding Introductions and moderation cases reviewed.
- Analytics snapshot recorded if required.

Admin handover

- Another authorized Admin is active.
- Organization and Event status explained.
- Open invitations, requests, moderation cases, and support issues handed over.
- Local exports transferred or deleted according to policy.
- Technical owner informed of the handover.

WaveSparks works best when access decisions are deliberate, Events are tested before launch, and Members receive clear next-step guidance. For technical operation and maintenance, use the project `README.md` with the technical owner.
